education

UT Austin

B.S. Computer Science
Turing Scholar
(2016-19)

Gunn High School
(2012-16)

interests

compute infra,
functional
programming,
machine learning,
natural language
grounding,
probabilistic
programming

work experience

- 07/24-now  **Tesla** Palo Alto, CA
Autopilot Software Engineer (AI Tooling)
- Overhauled development system for internal clip visualization tool.
 - Built a pre-caching system to improve load time of autopilot clip visualizations
 - Improved system infra, monitoring & oncall processes, and code quality.
- 2019-2024 **Robinhood**  Menlo Park, CA
Software Engineer & TL (Backend & Data, Experimentation Platform)
- Rearchitected our Experimentation service to use asynchronous data propagation for better reliability. Improved resource efficiency (\$\$\$) by 8x and enabled offline experimentation by rewriting in Golang.
 - Developed a flexible rule-based filtering system for safer, gradual rollout of Dynamic Config updates. Led an eng-wide migration to use the new system.
 - Built data pipelines for Experimentation; maintained & enhanced pipelines with new features, GDPR compliance, schema standardizations, etc.
- 2019 **Uber A.T.G.** (Advanced Technologies Group) Pittsburgh, PA
Software Engineering Intern (Motion Planning for Self-Driving)
- Worked on data pipelines to validate geometrically-constrained SDV behavior.
- 2018 **Uber Inc.** Palo Alto, CA
Software Engineering Intern (Maps)
- Developed Spark pipelines to generate vector tilesets to display map features.
 - Automated map generation from GPS traces using Hidden Markov Models.
- 2016 **Viabot (viabot.co)** (formerly Gnetic, Inc.) Palo Alto, CA
Software Engineer
- Put together and programmed electrical system for a prototype outdoor robot.
- 2014 **Declara, Inc. (www.declara.com)** Palo Alto, CA
Data Science Intern
- Developed a text tagging system for online documents, using python and techniques from text-retrieval, machine learning, and natural language processing.

projects

- 2019-2020 **Tensorflow Keras for Java** github.com/dhruvrajan/tensorflow-keras-java Los Altos, CA
Developing a high level training API on TensorFlow Java, based on tf.keras
- 2018-2019 **UTCS: TAUR NLP Group** Austin, TX
Applying NLP & Deep Learning to build brain cancer diagnosis models, supervised by radiology reports.
- 2017 **UTCS: Programming Languages** github.com/dhruvrajan/probabilistic-haskell Austin, TX
Worked on a system for functional probabilistic programming in Haskell.
- 2013-2016 **GRTPyFramework (FIRST, GRT # 192)** gunnrobotics.com, github.com/grt192 Palo Alto, CA
Developed a robotics control system in Python, and won the *Innovation in Controls* award at the 2016 Milwaukee Regional for automatic vision-aided aiming.
